

DISSOLVES RUST CREATING AN IDEAL SURFACE FOR COATING!

REMOVES RUST FROM METAL PRIOR TO PAINTING

The proprietary formulation penetrates into every void of a metal surface and dissolves rust/oxidation through chemical action. Cleaning time will vary according to the severity of the rust. Medium to light rust will be dissolved in 10 minutes or less, while heavier deposits may require a second application. Recommended for cast iron, stainless steel, aluminum, galvanized, chrome, and brass.

IDEAL FOR PAINTING!

Once the rust is dissolved, rinse or wipe the surface, and wait one hour or more before painting. Rust Remover Gel provides a clean surface free of contaminants, which creates a secure bond for any primer, paint, coating, etc. and enhances the performance of the paint.

PAINT PREP RUST REMOVER

CLINGS LONGER TO REMOVE RUST FROM VERTICAL SURFACES

Unique gel formula is ideal for vertical surfaces, and clings to the substrate to enable the rust removing crystals to attack and dissolve rust.
